July 2021

Dear Madam/Sir,

This report ('Report') has been prepared solely for Activaweb SAS in their assessment of the potential value of Activaweb SAS's intangible Assets as of July 2021. The valuation studies are completed as of July 2021, therefore any event that has occurred after this date has not been taken into consideration.

The report comprises the assessment of asset value based on income approach. Income approach reflects the present value of cash flows to be generated through the utilization of intangible assets by the management and adjusted in line with the judgement of professional valuation advisor. With this respect, the valuation results obtained by the application of this approach should not be evaluated as price of the assets or the fair market value. Fair market value is the price that would be negotiated between knowledgeable, willing parties in an open and unrestricted market and in arms length transaction.

By its very nature, valuation is not an exact science and conclusions arrived at all cases are subjective and dependent on individual judgement. The utilization plans, assumptions and the ability of the buyer to achieve the plans are not verified. Therefore, the effect of unexpected events in market, macroeconomic or political environment on results may be adverse or in favour of the buyer.

The information used in preparing this report has been obtained from the management. While the work performed to prepare this report includes analysis of financial information, accounting records, it has not included an audit with GAAS. Moreover, none of the information used in this report has been subjected to checking or verification. Accordingly, this report brings no responsibility and liability for the achievement of the predicted results. This report does not issue any opinion or assurance regarding achievability of the results presented in this valuation study.

This report was prepared according to demand of the Mackolik A.S management. SaBa doesn't accept any responsibility or liability that occurs because of the usage of third parties. The report can't be distributed to third parties or used for other purposes without our permission. In all cases, interlocutor of the report will remain as Mackolik A.S.'s management.

## Objective & scope

Objective of this report is the calculation of the estimated current value of Activaweb SAS's intangible assets according to the request of the Company management. The valuation study is requested by the Company for its own evaluation purposes, thereby this report doesn't carry any objectives for third parties.

Within the scope of the valuation study, 'Income Approach' method was used. We believe that this approach is the most suitable and reasonable method for the value calculations of the intangibles in question

The valuation date is determined as 30 July 2021.

No investigation is performed for the physical existence, legal ownership rights or possible impairment losses of the assets of the Company. We do not take any responsibility in this respect. Our valuation study assumes that there is no legal, physical or any other way of encumbrance/obstacle on the intangible assets and will not be in the near future.

By its very nature, valuation studies are based on the subjective assumptions and decisions. Even though it is impossible to exactly determine the price which will occur between two independent and willing parties under normal market conditions, calculation of a range of possible values by the use of reasonable valuation methods applied by a professional valuation team will probably represent the best approach to estimate such price.

We, as SaBa International Financial Advisory BV established in the Netherlands, have not conducted any assurance process on the feasibility of commercial and financial projections provided to us by the Company management. However, we have performed reasonableness checks and inquiry on any data submitted to us in line with our professional judgment.

# Valuation Results

Intangible assets in EUR	Net present value of economic benefits in cash as of July 2021		
	Prudent scenario	Base scenario	Best scenario
IOS information technology systems	1,708,846	2,294,374	3,412,855
Android information technology systems	3,407,795	4,124,750	5,043,935
WEB-based information technology systems	2,025,970	2,214,369	2,423,735
<b>Total value of intangibles</b>	<b>7,142,611</b>	<b>8,633,492</b>	<b>10,880,525</b>

Upon application of income method of valuation on intangible assets of the Company, we concluded a total asset value within the range of EUR 7,1M and EUR10,9M,

Nearly half of this value comes from Android information system investments of the Company.

We believe that intangible assets will be able to generate a cash inflow stream with a minimum present value of EUR7,1M under going concern assumption.

# Macroeconomic Summary

GDP, current prices (in billions USD).

GDP growth rate of France followed an increasing trend overall. In 2020, GDP growth rate effected from the local and global impacts of Covid-19 and France's GDP growth rate stayed around 2%. Considering recovery period of France and the World from Covid-19, GDP growth of Turkey is predicted to be almost 6% in 2021 and steady 3,5% growth in the upcoming years.

Inflation (%)

The inflation rate that was %0,01 in 2014 followed an uptrend after 2 years. Although the rate has declined between 2018 and 2019 because, it increased again and continued with a volatile movement.

GDP per Capita (thousand USD)

GDP per capita has decreased from 2014 to 2020 gradually. Depreciation of Turkish Lira is the main reason for decreased GDP per capita (USD). However with the expected recovery of Turkish and global economy in the near future, GDP per capita is expected to increase steadily.

Unemployment (%)

Unemployment rate also followed a downtrend due to economical instability between 2010 and 2014. According to some IMF estimates the rate will decrease over years and the recovery from covid-19 will contribute to unemployment rate.

## Macroeconomic Summary

EURUSD exchange rate trend is gradually decreasing in recent period with increasing inflation rates and rising expectation of interest rate hikes in the United States. We estimate further appreciation of USD against EUR in the coming period.

On the other hand, functional currency of the buyer entity, Mackolik, which is Turkish Lira, is in a sharp upward trend starting from the last quarter of 2021. We expect this trend continue further until the end of year 2022.

## In-App and Web Advertising

Mobile apps have evolved drastically in the last decade, going from simple tools integrated into the first smartphone device to essential, ubiquitous applications that are integral to our everyday lives.

Whether we need to order food to our doorstep, communicate with our friends, book travel, or entertain ourselves, there is an icon at our fingertips to deliver whatever we need in the moment. It's no wonder that people are now devoting a third of their waking time to mobile apps - an average of 4.8 hours a day. Where people are spending more time in apps, app advertising spend follows.

Global spending topped \$295bn last year, suggesting that mobile advertising is having a resurgence and that in-app advertising presents a huge opportunity for brands to reach engaged audiences.

The mobile app industry has come a long way in the last decade. From simple, functional, nice-to-have tools that were integrated into the first Apple iPhone to a fundamental part of everyday life for communication, entertainment, retail, gaming, and more. Today there are millions of apps available across mobile devices.

In fact, according to eMarketer, 89% of mobile usage time is now spent in-app. The COVID-19 pandemic has contributed to the tremendous growth of digital and in-app in multiple verticals like grocery, food delivery, health, fitness, and more. Although growth has slowed with vaccination rollouts and economies returning to normal operations, it is still visible in multiple verticals.

According to IAB Europe's 2020 AdEx Benchmark report, more than 50% of digital ad spend is now allocated to mobile. Where desktop spend has seen a decline, mobile advertising has seen double-digit growth. With consumers now spending an average of 4.8 hours per day using apps on their smartphones, this brings additional opportunities for publishers and marketers alike, which we will explore in the following sections.

# In-App and Web Advertising

## ADVERTISING FORMATS

### VIDEO ADS

- Minimum 24 fps
- 15 sec max length for animation
- 30 sec max length for video (unlimited user-initiated)
- 2.2 MB additional file size for host-initiated video (unlimited user-initiated)

### BENEFITS

Short, informative video ads provide great user experiences  
Video ads tell brand stories better than other formats  
Video is an excellent format for informing and education

### REWARDED VIDEO ADS

Rewarded video ads offer users a value exchange – a free in-app reward for watching a video ad.

### BENEFITS

- High engagement
- High completion rate
- High viewer satisfaction, as users get prizes after watching the video

For in-app advertising success, combating “banner blindness” is key. Splash Ads are full-screen interstitials that pop up when a user loads an app. For marketers, this gives a big opportunity to catch users while they are fresh and engaged, and the splashy full-screen ad means lots of room to show off the creative. For publishers, splash ads can help drive eCPMs without disrupting the user experience. They offer a great way to monetise mobile apps without compromising the user experience.

### STANDARD BANNER ADS

- 320 x 50 or 300 x 250 banner ads; static or animated, usually clutter the top of bottom of the screen

### BENEFITS

- Available on all screens
- Can be executed in large volumes
- Very quick to deploy
- Easy to integrate

### EXPANDABLE ADS

Expandable ads are rich media ads

- 320 x 50 banner that increases in size usually at 320 x 480 following a tap

### BENEFITS

- More information opportunities with the expansion unit – i.e. videos and interactivity
- Obtain valuable traction – through action-driven expansion where you can measure the number of times users view the ad content

Native Ads also tend to be high performers. Because they fit seamlessly into the surrounding content, users get an unobtrusive ad experience. Native ads, whether video, image, or rich media, also offer contextually-relevant creative opportunities. As a result, engagement rates are much higher, and brand sentiment can also improve for both publishers and advertisers.

# Valuation Method – Income Approach

## Discounted cash flows (DCF) method

In DCF method, asset value is calculated by projecting all free cash flows to be generated throughout the useful life of the intangible asset.

Total value comprises of the elements below:

- i. Present value of the net free cash flows that will be obtained through useful life of the intangible asset
  - ii. A residual value that represents the prediction of net free cash flows that will be obtained at the end of the useful life
  - iii. Value of other assets directly attributable to the intangible asset.
- i. Net free cash flows that will be generated throughout the useful life of the intangible asset is calculated by subtracting expenses related with main operational activities, managerial and overhead activities and capital expenditures needed to support the sustainability of operation of the asset. Finally, by subtracting the amount of cash outflows due to tax liabilities, net free cash flows that can be enjoyed by the shareholders is found.

Göztepe V.D. 609 044 49 52

# Valuation Method – Income Approach

## Weighted average cost of capital

In DCF method, WACC represents the return rate which is used to calculate the amount that a potential investor is willing to pay in return for the projected future net free cash flows. This rate is calculated by adding to the risk-free investment rate the risk perceptions for macroeconomic environment in which the Company operates, the sector the Company businesses belong to, specific risks pertaining to the company and its business assets. According to generally accepted independent valuation principles, the formula used to calculate WACC, is stated below:

$$AOSM = (W_E \times C_E) + (W_D \times C_D)$$

Weight of Equity  
Cost of equity  
Weight of debt  
Cost of debt after tax

In the Cost of Equity calculation, generally recognized Capital Asset Pricing model is used. According to this model, cost of equity calculation formula is stated below:

$$C_E = R_f + (\beta \times P_m)$$

Cost of Equity  
Risk free rate  
Market risk premium  
Beta

## Valuation Methods – Income Approach

### Risk free rate

The 10 year Eurozone Central Government Bond Par Yield Curve is used as a risk-free investment rate for the calculation of cost of equity.

### Market risk premium

In income approach, to predict the market risk premium for the calculation of cost of equity, historical data of average return rates of stock market and risk-free government bond return rates were analyzed. As a result of this analysis, market risk premium was determined as %5.

### Beta

Beta is a measure of the volatility —or systematic risk— of the return of the company's business compared to the market as a whole. The beta of a company measures how the company's equity market value changes with changes in the overall market. It represents the relationship between systematic risk and Company's predicted return. A beta multiplier over 1 points out a higher volatility compared to market average.

In our valuation study, unlevered beta values of peer companies and market as a whole were examined to determine the best beta that will be employed.

### Cost of debt

Cost of debt represents the post-tax cost of funds that the Company can raise under normal circumstances for financing its operational activities and investments.

## Activaweb SAS- Income Approach

### Present value of future cash flows from assets

Upon our professional valuation assumptions and methodology, we believe that intangible assets of the Company amounts to a value between EUR7,1M and EUR10,9M as of the end of July, 2021.

In our opinion, the fair sales value of these intangibles under arms length transaction must be within these ranges shown in the diagram aside.

## Project team

**M. Savaş Sepin**  
Managing Partner

As an expert in the fields of financial advisory, banking and corporate finance, M. Savaş Sepin has more than 20 years of progressive experience in large international organizations. He spent 7 years in PricewaterhouseCoopers (PwC) focused on financial audit and IFRS advisory services adding valuable contributions to the financial position of both local and multinational companies.

During his experience with PwC, he led financial audits of largest private banks of Turkey and participated in various due diligence projects. He also directed and coordinated numerous IFRS advisory, hedge accounting, P&L optimization and technical review projects as head of Financial Instruments division of PwC technical services. He was also official PwC IFRS instructor and guest lecturer at prominent Turkish universities.

Mr. Sepin also spent more than 6 years in banking sector. He was chief financial officer and deputy CEO of one of the prominent banks in Romania. As a management board member, besides operational and financial management of the Bank, he also coordinated the financial management and restructuring of several subsidiary companies of the organization. Mr. Sepin has also performed as chief financial officer and deputy CEO of the largest investment bank of Turkey and as management board member of several subsidiaries of the bank which carry out activities in many different sectors.

Since 2015, Mr. Sepin is taking an active role in Dutch and UK financial advisory marketplace managing various international reorganization and relocation projects. He successfully managed and completed many Dutch and UK structuring engagements.

M. Savaş Sepin holds TURMOB Certified Public Accountant License, Public Oversight Accounting & Auditing Standards Board Independent Auditor License, Capital Markets Board (CMB) Advanced Level (Level III) License, CMB Derivative Instruments License, CMB Corporate Governance License, CMB Credit Rating License and CMB Independent Auditor License.

Mr. Sepin earned his bachelor's degree from Istanbul Technical University and MBA degree from Bogazici University. He has honor award from Istanbul Technical University and double promotion honor from PricewaterhouseCoopers together with several success degrees&honors from different institutions.

MAÇKOLİK İNTERNET HİZMETLERİ TİCARET ANONİM ŞİRKETİ  
Yönetimine,

İşbu İzahname'nin bir parçası olan Mackolik İnternet Hizmetleri Ticaret A.Ş.'ye ait 15 Eylül 2022 tarihinde imzalanan 30 Haziran 2022 tarihinde sona eren hesap dönemine ait bağımsız denetim raporu ve 22 Ağustos 2022 tarihinde imzalanan 31 Aralık 2021 ve 2020 tarihlerinde sona eren hesap dönemlerine ait bağımsız denetim raporunda kullanılan değerlendirme çalışmamız, Activaweb SAS'nin Temmuz 2021 tarihindeki maddi olmayan duran varlıklarının potansiyel değerinin ölçülmesine yönelik olarak yalnızca Activaweb SAS için ve onun kullanımına yönelik olarak hazırlanmıştır.

Şirketin aktiflerinin fiziki varlığı, kanuni mülkiyet hakları ve olası değer düşüklüklerine ilişkin tarafımızca herhangi bir soruşturma yapılmamış olup, çalışmalarımızda Şirketin ilgili varlıkları üzerinde herhangi bir hukuki ve/veya fiziki takyidat/engel bulunmadığı ve yakın gelecekte bulunma olasılığının olmadığı kabul edilmiştir

Değerleme çalışmaları doğası gereği subjektif varsayım ve hükümlere dayanmakta olduğundan, karşılıklı olarak iyi niyetli ve istekli iki taraf arasında normal piyasa şartlarında oluşacak değerleri belirlemek mümkün olmamakla birlikte, profesyonel bir değerlendirme ekibi tarafından makul değerlendirme yöntemleri üzerinden bir değer aralığı saptamak en uygun yaklaşımı temsil etmektedir.

Şirket yönetimi tarafından sağlanan finansal veri ve bilgilerin tarafımızca herhangi bir denetim ya da inceleme çalışmasına tabi tutulmadan doğruyu yansıttığı kabul edilmiştir. Bununla birlikte, tarafımıza sunulmuş bulunan finansal veri ve bilgileri temel alan tahmin ve projeksiyonların dayandığı varsayımların makuliyeti ve tutarlılığı tarafımızca gözden geçirilmiş ve bu bilgilerin anlamını değiştirecek nitelikte bir eksik bulunmaması için her türlü makul özenin gösterilmiş olduğunu beyan ederiz.

Saygılarımızla,

  
SABA International Financial Advisory BV
